Charan S

Full-Stack Product Engineer | Flutter · FastAPI · React

Coimbatore, India · charanvpm2002@gmail.com · linkedin.com/in/charan-s-032935222

PROFESSIONAL SUMMARY

Full-stack product engineer with 2+ years of experience building Flutter mobile apps, Python/FastAPI and PostgreSQL backends, and React/TypeScript web apps. **Owns the full lifecycle**: business analysis, PRDs, API contracts, UI/UX, development, and testing. Works solo on both client and in-house products. Integrates WhatsApp, LHDN MyInvois, three payment gateways, and multiple AI providers. Uses Claude Design, Claude Code CLI, agents, and personal Claude Code skills to deliver **in 2–2.5 months what is typically a six-month build**. Open to relocation or remote.

EXPERIENCE

Flutter Developer · Rosemallow Technologies Pvt Ltd — Jul 2025 – Present

- Used Claude Code to build MyInvois SME Booster's multi-tenant FastAPI and PostgreSQL backend **in one month**, with row-level security isolating each seller's data inside the database.
- Enabled invoice capture from typed text, receipt photos, and voice notes in WhatsApp, with fallback across AI providers and **every AI-extracted field re-validated like manual entry** before LHDN submission.
- Built Haritha By Michael, a client's luxury event-venue booking platform, end to end with Claude Code: **a FastAPI and PostgreSQL backend plus a React/TypeScript web app**, with role-based access in both.
- Built My Game Booking's customer and venue-operator Flutter apps on the backend team's APIs, designing the UI/UX in Claude Design and adding Cashfree, Razorpay, and PayU checkout for **booking in under a minute**.
- Wrote the BRDs, PRDs, and API contracts for every product and **guided backend developers** on business logic, endpoints, and request/response contracts before implementation began.
- Validated two product ideas through market and competitor research, one self-initiated and one from a CEO brief, and pitched plans that won the CEO's approval and full ownership of both.
- Introduced Claude Code to the 5-person team after proving it in two weeks, and created 20+ personal Claude Code skills automating scaffolding, API integration, and tests to **deliver six-month builds in 2–2.5 months**.

Junior Flutter Developer · Scode Software Solutions — Jun 2024 – Jun 2025

- Main Flutter developer on CGT Aesthetics, a US medical spa's booking app, **integrating both the Booker scheduling API and the client's AWS-hosted REST backend** for live provider availability, slot booking, e-signed consent forms, and adding bookings to the phone's calendar.
- Worked on authenticated and guest sessions with secure token storage, appointment history and cancellation, and Firebase push notifications.
- Delivered **the complete UI and API integrations** for Advertmingo, a UK client's advertising platform, while guiding an intern and working with the client's product manager and backend developers.

PROJECTS

My Game Booking · Turf and sports-venue booking platform — In development · store release underway

Rosemallow Technologies · product owner and mobile developer

- **Problem:** Players hunt for turfs on Google Maps and phone owners to check slots, while owners take bookings by phone, WhatsApp, and walk-in with no single record, so double-bookings happen.
- **Research:** Mapped 16 pain points across 10 customer segments, benchmarked 6 competitors including Zomato's District, and modelled 11 revenue streams and a 5-phase roadmap.
- **System:** Two Flutter apps over a REST booking engine: players get 5-minute slot holds, conflict handling, payment recovery, and refunds; owners get a live calendar, walk-ins, and payouts.

- **Built with Claude end to end:** Claude for research and the PRD, and Claude Code with personal skills to build both apps and write the automated tests.

Flutter · BLoC · REST APIs · Firebase · Google Maps · Cashfree · Razorpay · PayU · Claude Design · Claude Code

MyInvois SME Booster · **WhatsApp e-invoicing for Malaysian SMEs** — In development · demoed to SMEs

Rosemallow Technologies · full-stack developer and product owner

- **Problem:** Filling and validating up to 55 fields per e-invoice on LHDN's MyInvois portal takes about 10 minutes at a desk; the bot cuts that to 1–2 minutes from a phone.
- **Research:** Wrote a 20-section product blueprint and 8 research studies, covering intermediary API access, one-scan onboarding, buyer auto-fill, and item classification, plus an audit against LHDN rules.
- **System:** Signs UBL 2.1 invoices with XAdES, submits them to LHDN idempotently, polls for LHDN's result in background workers, and sends approved invoices to buyers, tested end to end against an LHDN simulator.
- **Built with Claude end to end:** Claude for the blueprint and research, Claude Code for the backend and its automated tests, and Claude inside the bot itself to read free-text invoices.

FastAPI · PostgreSQL · SQLAlchemy · Alembic · UBL 2.1 · XAdES · WhatsApp Cloud API · Anthropic API · Groq · Claude Code

CineAd · **Cloud ad publishing for standalone theatres** — Demo-ready MVP

Rosemallow Technologies · product researcher and kiosk-app developer

- **Problem:** Theatre ads still travel by pen drive, email, and WhatsApp and are loaded by hand at each screen, so a campaign across 100 theatres is hard to update, track, or prove it ran.
- **Research:** Mapped 14 pain points for agencies, theatres, and advertisers, then specified peak-day scheduling, proof-of-play, and reach reports in the feature spec, information architecture, and user flows.
- **System:** One Flutter app runs as kiosk or remote: the kiosk pairs with the Django backend, serves playback over a WebSocket found by mDNS, and logs every manual override apart from scheduled plays.
- **Built with Claude end to end:** Drafted all 12 research and design documents with Claude, then built the demo app in 10 days with Claude Code and personal skills.

Flutter · BLoC · Dio · WebSockets · mDNS · Android · Clean Architecture · Claude Code

SKILLS

AI-Native Development: Claude Code CLI (personal skills), agents, Claude Design, Anthropic API, Groq, Workers AI

Backend: Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, REST API design, pytest, mypy, GitHub Actions, nginx

Web & Mobile: React, TypeScript, Flutter, Dart, BLoC, Clean Architecture, Android, iOS, Firebase

Integrations: WhatsApp Cloud API, LHDN MyInvois, Razorpay, Cashfree, PayU, Google Maps, WebSockets

Product: idea validation, market research, BRD & PRD, API contracts, UI/UX design, test strategy

EDUCATION

B.E. in Computer Science and Engineering · **Anna University, Panruti** — 2020 – 2024
