PROFESSIONAL SUMMARY

Product engineer with 2+ years of experience who turns business ideas into mobile apps, websites, and backend services, **owning products from market research to a working build**. Validates CEO-led and self-initiated ideas through competitor and viability analysis, pitches the business case to the CEO, then owns requirements, UI/UX, development, and testing. Introduced Claude Code at Rosemallow and built an AI-native workflow on Claude Design, Claude Code CLI, agents, and personal Claude Code skills that delivers **in 2–2.5 months what is typically a six-month build**.

EXPERIENCE

Flutter Developer · Rosemallow Technologies Pvt Ltd

Jul 2025 – Present

- Spotted a gap in local turf booking via competitor research, pitched My Game Booking to the CEO, and **won full ownership**, writing the PRD and building its customer and venue-operator apps for under-a-minute booking.
- Turned a one-line CEO brief on Malaysia's e-invoicing mandate into MyInvois SME Booster, proposing a WhatsApp-first design and **building it with Claude Code in one month**.
- Pitched Claude Code when the CEO wanted faster delivery, proved its results within two weeks, and **won its adoption across the 5-person team**, now delivering six-month builds in 2–2.5 months.
- Created **20+ personal Claude Code skills** that automate Flutter Clean Architecture scaffolding, API integration, Firebase environment setup, and test-case design, keeping AI-generated code consistent across products.
- Designed and built every mobile app as the **only mobile developer, with no designers**: Oasis with Lovable and Google Stitch prompts, and every app since with Claude Design and Claude Code CLI.
- Used Claude Code to build Haritha By Michael, a client's luxury event-venue booking and management platform, full-stack in FastAPI, PostgreSQL, and React/TypeScript, with role-based access control.

Junior Flutter Developer · Scode Software Solutions

Jun 2024 – Jun 2025

- Main Flutter developer on CGT Aesthetics, a US medical spa's booking app on the Booker scheduling API, **covering treatment and add-on selection, provider choice, live slot booking, and in-app consent forms with e-signature**, and adding bookings to the phone's calendar.
- Worked on CGT's growth and retention features: Allē and Aspire loyalty rewards, refer-a-friend rewards, gift cards, promotions, and guest access without sign-up.
- Led the app build for Advertmingo, a UK client's advertising platform, delivering **the complete app UI and API integrations while guiding an intern** and working directly with the client's product manager.

PRODUCTS

My Game Booking · Turf and sports-venue booking platform

In development · store release underway

Rosemallow Technologies · product owner and mobile developer

- **Problem:** Players hunt for turfs on Google Maps and phone owners to check slots, while owners take bookings by phone, WhatsApp, and walk-in with no single record, so double-bookings happen.
- **Research:** Mapped 16 pain points across 10 customer segments, benchmarked 6 competitors including Zomato's District, and modelled 11 revenue streams and a 5-phase roadmap.
- **Product:** Players find nearby turfs on a map, see live slot availability, pay online, and check in by QR code; owners run bookings, walk-ins, and payouts from a live calendar.

- **Built with Claude end to end:** Claude for research and the PRD, Claude Design for the UI/UX, and Claude Code with personal skills to build both apps and write the automated tests.

Flutter · BLoC · REST APIs · Firebase · Google Maps · Cashfree · Razorpay · PayU · Claude Design · Claude Code

MyInvois SME Booster · **WhatsApp e-invoicing for Malaysian SMEs** — In development · demoed to SMEs

Rosemallow Technologies · full-stack developer and product owner

- **Problem:** Filling and validating up to 55 fields per e-invoice on LHDN's MyInvois portal takes about 10 minutes at a desk; the bot cuts that to 1–2 minutes from a phone.
- **Research:** Wrote a 20-section product blueprint and 8 research studies, covering intermediary API access, one-scan onboarding, buyer auto-fill, and item classification, plus an audit against LHDN rules.
- **Product:** Sellers create an invoice in WhatsApp by typing, photographing, or speaking in English or Malay, get it validated by LHDN, and send it to the buyer; saved details make repeat invoices faster.
- **Built with Claude end to end:** Claude for the blueprint and research, Claude Code for the backend and its automated tests, and Claude inside the bot itself to read free-text invoices.

Python · FastAPI · PostgreSQL · WhatsApp Cloud API · LHDN MyInvois API · Anthropic API · Groq · Claude Code

CineAd · **Cloud ad publishing for standalone theatres** — Demo-ready MVP

Rosemallow Technologies · product researcher and sole Flutter developer

- **Problem:** Theatre ads still travel by pen drive, email, and WhatsApp and are loaded by hand at each screen, so a campaign across 100 theatres is hard to update, track, or prove it ran.
- **Research:** Mapped 14 pain points for agencies, theatres, and advertisers, then specified peak-day scheduling, proof-of-play, and reach reports in the feature spec, information architecture, and user flows.
- **Product:** An Android kiosk plays each screen's ad reel full-screen at showtime, while an operator's phone on the same Wi-Fi finds it automatically to pause, skip, or restart ads with a synced preview.
- **Built with Claude end to end:** Drafted all 12 research and design documents with Claude, then built the demo app in 10 days with Claude Code and personal skills.

Flutter · Dart · BLoC · Clean Architecture · WebSockets · mDNS · Dio · Android · Claude Code

SKILLS

AI-Native Development: Claude Code CLI (personal skills), agents, Claude Design, Anthropic API, Groq, Workers AI

Product: idea validation, competitor research, BRD & PRD, UI/UX design, API contracts, test strategy

Mobile: Flutter, Dart, BLoC, Android, iOS, Clean Architecture, Firebase, FCM push, WebSockets

Backend & Web: Python, FastAPI, PostgreSQL, SQLAlchemy, React, TypeScript, pytest, GitHub Actions

Integrations: WhatsApp Cloud API, Razorpay, Cashfree, PayU, LHDN MyInvois, Google Maps, Postman

EDUCATION

B.E. in Computer Science and Engineering · **Anna University, Panruti** — 2020 – 2024
